

# **OWENS CORNING COMMUNITY INFORMATION SESSION**

---

INNOVATIONS FOR LIVING®

**Welcome**  
**Please Sign In**

# FACILITY HISTORY

INNOVATIONS FOR LIVING®

**Site Location:** 160 Jackson Road, Berlin Borough, Camden County, NJ

**Site Size:** Approximately 45 acres

- Facility operated as a sand and brick manufacturing plant
- Owens-Illinois Glass Company purchased the facility and continued to manufacture brick
- Manufacturing operations converted to the production of high temperature insulating materials when Owens Corning purchased the facility
- Manufacturing operations ended
- Buildings removed

Today the site is vacant and enclosed by a fence. Roughly 25 percent is covered by paving, building pads and other improvements related to the former manufacturing operations.

# ABOUT OWENS CORNING

INNOVATIONS FOR LIVING®

- Owens Corning (NYSE: OC) is a leading global producer of residential and commercial building materials, glass-fiber reinforcements and engineered materials for composite systems
- A Fortune® 500 Company for 58 consecutive years, Owens Corning is committed to driving sustainability by delivering solutions, transforming markets and enhancing lives
- Founded in 1938, Owens Corning is a market-leading innovator of glass-fiber technology with sales of \$5.3 Billion in 2011 and about 15,000 employees in 28 countries on five continents
- Additional information is available at: [www.owenscorning.com](http://www.owenscorning.com)

# PROJECT OVERVIEW

INNOVATIONS FOR LIVING®

Owens Corning entered the Berlin, NJ site into the Industrial Site Recovery Act (ISRA) program when manufacturing operations ceased in October 1993.

Site investigation activities, conducted in cooperation with and under the direction of the New Jersey Department of Environmental Protection (NJDEP), identified soil and groundwater impacts on-site related to the former manufacturing operations.

## On-Site

Investigation activities included:

- Sampling soil
- Sampling groundwater
- Further defining the extent of groundwater impacts
- Completion of an updated receptor evaluation including off-site well search and a baseline ecological evaluation

On-site impacts were identified as primarily related to the historic use of DOWTHERM A™ (a heat transfer fluid), fuel oil, and various lubricants.

## Off-Site

No migration of impacts to off-site soil.

Two constituents of DOWTHERM A™ were identified in off-site groundwater samples collected in February/March, 2012.

Owens Corning is pursuing a parallel path to:

- Define the extent of impacts to groundwater
- Conduct a limited well survey to identify private potable water wells in an area defined by NJDEP requirements and to test those wells in accordance with NJDEP guidance and protocols

# WHAT IS AN LSRP?

INNOVATIONS FOR LIVING®

**Licensed Site Remediation Professionals (LSRPs)** have responsibility for oversight of environmental investigation and cleanup in New Jersey. As of May 2012, LSRPs replace NJDEP Case Managers for all sites not under direct oversight of the Department.

Day-to-day management of site remediation is now overseen by qualified LSRPs but NJDEP will retain significant authority over the remediation process and ensure LSRPs comply with applicable regulations.

The LSRP program is one of many sweeping changes made by the NJ state legislature to speed up the cleanup of environmental sites in the state. The program is part of the Site Remediation Reform Act.

David Thompson  
with ARCADIS US, Inc.  
is LSRP for the  
Owens Corning  
former Berlin, NJ site.

# THE REGULATORY PROCESS

INNOVATIONS FOR LIVING®

Owens Corning is responsible for the investigation and remediation of the former manufacturing facility site in Berlin, NJ.

All work is conducted in accordance with the rules and regulations of the New Jersey Department of Environmental Protection (NJDEP).

There are five primary phases of site investigation and remediation. For large and/or complex sites, activities in support of the various phases can sometimes overlap or be implemented at the same time.

## Primary phases of site investigation and remediation

<b>SITE ASSESSMENT</b>	<b>REMEDIAL INVESTIGATION</b>	<b>REMEDIAL ACTION SELECTION</b>	<b>REMEDIAL ACTION</b>	<b>SITE CLOSURE &amp; MONITORING</b>
<ul style="list-style-type: none"><li>• Preliminary Assessment</li><li>• Historical Research</li><li>• Site Investigation</li><li>• Confirm Presence or Absence of Contamination Report</li></ul>	<ul style="list-style-type: none"><li>• Work Plan</li><li>• Soil and Groundwater Sampling</li><li>• Define Nature and Extent of Contamination</li><li>• Interim Remedial Measures Report</li></ul>	<ul style="list-style-type: none"><li>• Define Remedial Objectives</li><li>• Evaluate Technologies</li><li>• Select Remedy Report</li></ul>	<ul style="list-style-type: none"><li>• Soil Excavation</li><li>• Groundwater Treatment</li><li>• Subsurface Barrier</li><li>• Site Caps</li><li>• Confirm Presence or Absence of Contamination Report</li></ul>	<ul style="list-style-type: none"><li>• Confirm Success of Remedial Action</li><li>• Remedial Action Outcome</li><li>• Monitor Conditions Over Time and Report</li></ul>

# CURRENT STATUS — GROUNDWATER INVESTIGATION

INNOVATIONS FOR LIVING®

**2010**

**2011**

**2012**

- **Dec.**  
Owens Corning chooses to “opt in” early to the LSRP process

- **Feb. - Mar.**  
Testing finds levels of constituents related to DOWTHERM A™ on-site near the fence line of the eastern property boundary
- **Apr. - Dec.**  
ARCADIS, Owens Corning’s environmental consultant, develops a work plan for off-site sampling and begins to pursue access for off-site investigation locations

- **Jan.**  
Obtain access from NJ DOT and Camden County to collect samples at 8 off-site locations to the east of the property boundary
- **Feb. - Mar.**  
Collect samples from off-site locations and find levels of DOWTHERM A™ -related constituents above NJDEP groundwater quality standards
- **April**  
Issue public notification letters to properties in Berlin Township and Berlin Borough, and post a public notice of the findings in the *Camden Courier-Post*, in accordance with NJDEP requirements  
  
Implement well survey of private potable water wells, in accordance with NJDEP guidance and protocols
- **May**  
Collect samples from private potable water wells, in accordance with NJDEP guidance and protocols

# NEXT STEPS — GROUNDWATER INVESTIGATION

INNOVATIONS FOR LIVING®

**Owens Corning is committed to protecting public health and the environment.**

We are pursuing three paths of action simultaneously.

## **A well survey and testing program**

To identify the existence and use of private potable water wells within close proximity to known impacts

To ensure through testing materials related to the Owens Corning site are not impacting private potable water wells

## **Delineation of the extent of impacts to groundwater**

Activities planned east of the site include:

- Groundwater sampling from off-site locations
- Ongoing monitoring

## **Development of remedial plans**

To address on-site and off-site conditions contributing to groundwater impacts

# **WORKING IN ACCORDANCE WITH NJDEP REGULATIONS**

INNOVATIONS FOR LIVING®

Owens Corning is working in accordance with the rules and regulations of the New Jersey Department of Environmental Protection (NJDEP) and in cooperation with, and under the direction of, the site's Licensed Site Remediation Professional (LSRP) to investigate and remediate both the environmental conditions at our site and the effects to groundwater off-site from materials related to the former manufacturing site in Berlin, NJ.

# ABOUT DOWTHERM A™

INNOVATIONS FOR LIVING®

- DOWTHERM A™ is a heat transfer fluid which has been used in a wide range of industrial heating systems for over 60 years - it is still in use today
- It was used at the Owens Corning former Berlin, NJ facility in the insulation manufacturing process
- It is a mixture of two organic compounds, 1,1-Biphenyl and Diphenyl ether
- It is biodegradable and non-persistent in the environment
- There is no evidence that harmful products are formed as a result of biodegradation

(Source: Materials Safety Data Sheet - Dowtherm A™ The Dow Chemical Company, Published November 2001)

# ABOUT SEMI-VOLATILE ORGANIC COMPOUNDS (SVOCs)

---

INNOVATIONS FOR LIVING®

- The two DOWTHERM A™-related constituents identified in off-site groundwater (1,1-Biphenyl and Diphenyl ether) are semi-volatile organic compounds (SVOCs)
- SVOCs are a class of organic compounds made up of acid extractable and base neutral organic compounds and include hydrocarbon compounds related to heavier oil products

# WHY WE'RE TESTING FOR DEHP

INNOVATIONS FOR LIVING®

Because Owens Corning found levels of DEHP in some groundwater samples collected both on-site and off-site, we are required by NJDEP regulations to include it in our ongoing groundwater investigation.

There is no known connection between DEHP and the Owens Corning former Berlin, NJ facility operations.

## WHAT IS DEHP?

- It is a manufactured chemical that is commonly added to plastics to make them flexible
- It is present in many plastic products and therefore found to be widespread in the environment
- DEHP is the acronym for Bis(2-Ethylhexyl)phthalate

# WHAT IS A WELL SURVEY AND WHY IT IS NEEDED

---

INNOVATIONS FOR LIVING®

**The purpose of a well survey is to identify the existence and use of private water wells. It is performed in steps.**

Step 1 Review state records to identify properties with possible private water wells

Step 2 Send letters to owners of properties asking them if they have a private water well and how it is used

Step 3 Sample private water wells used or designed for use as a potable water supply

It is needed to ensure public health and safety is protected and to help determine the appropriate steps to provide safe drinking water.

# HOW THE PROCESS WORKS

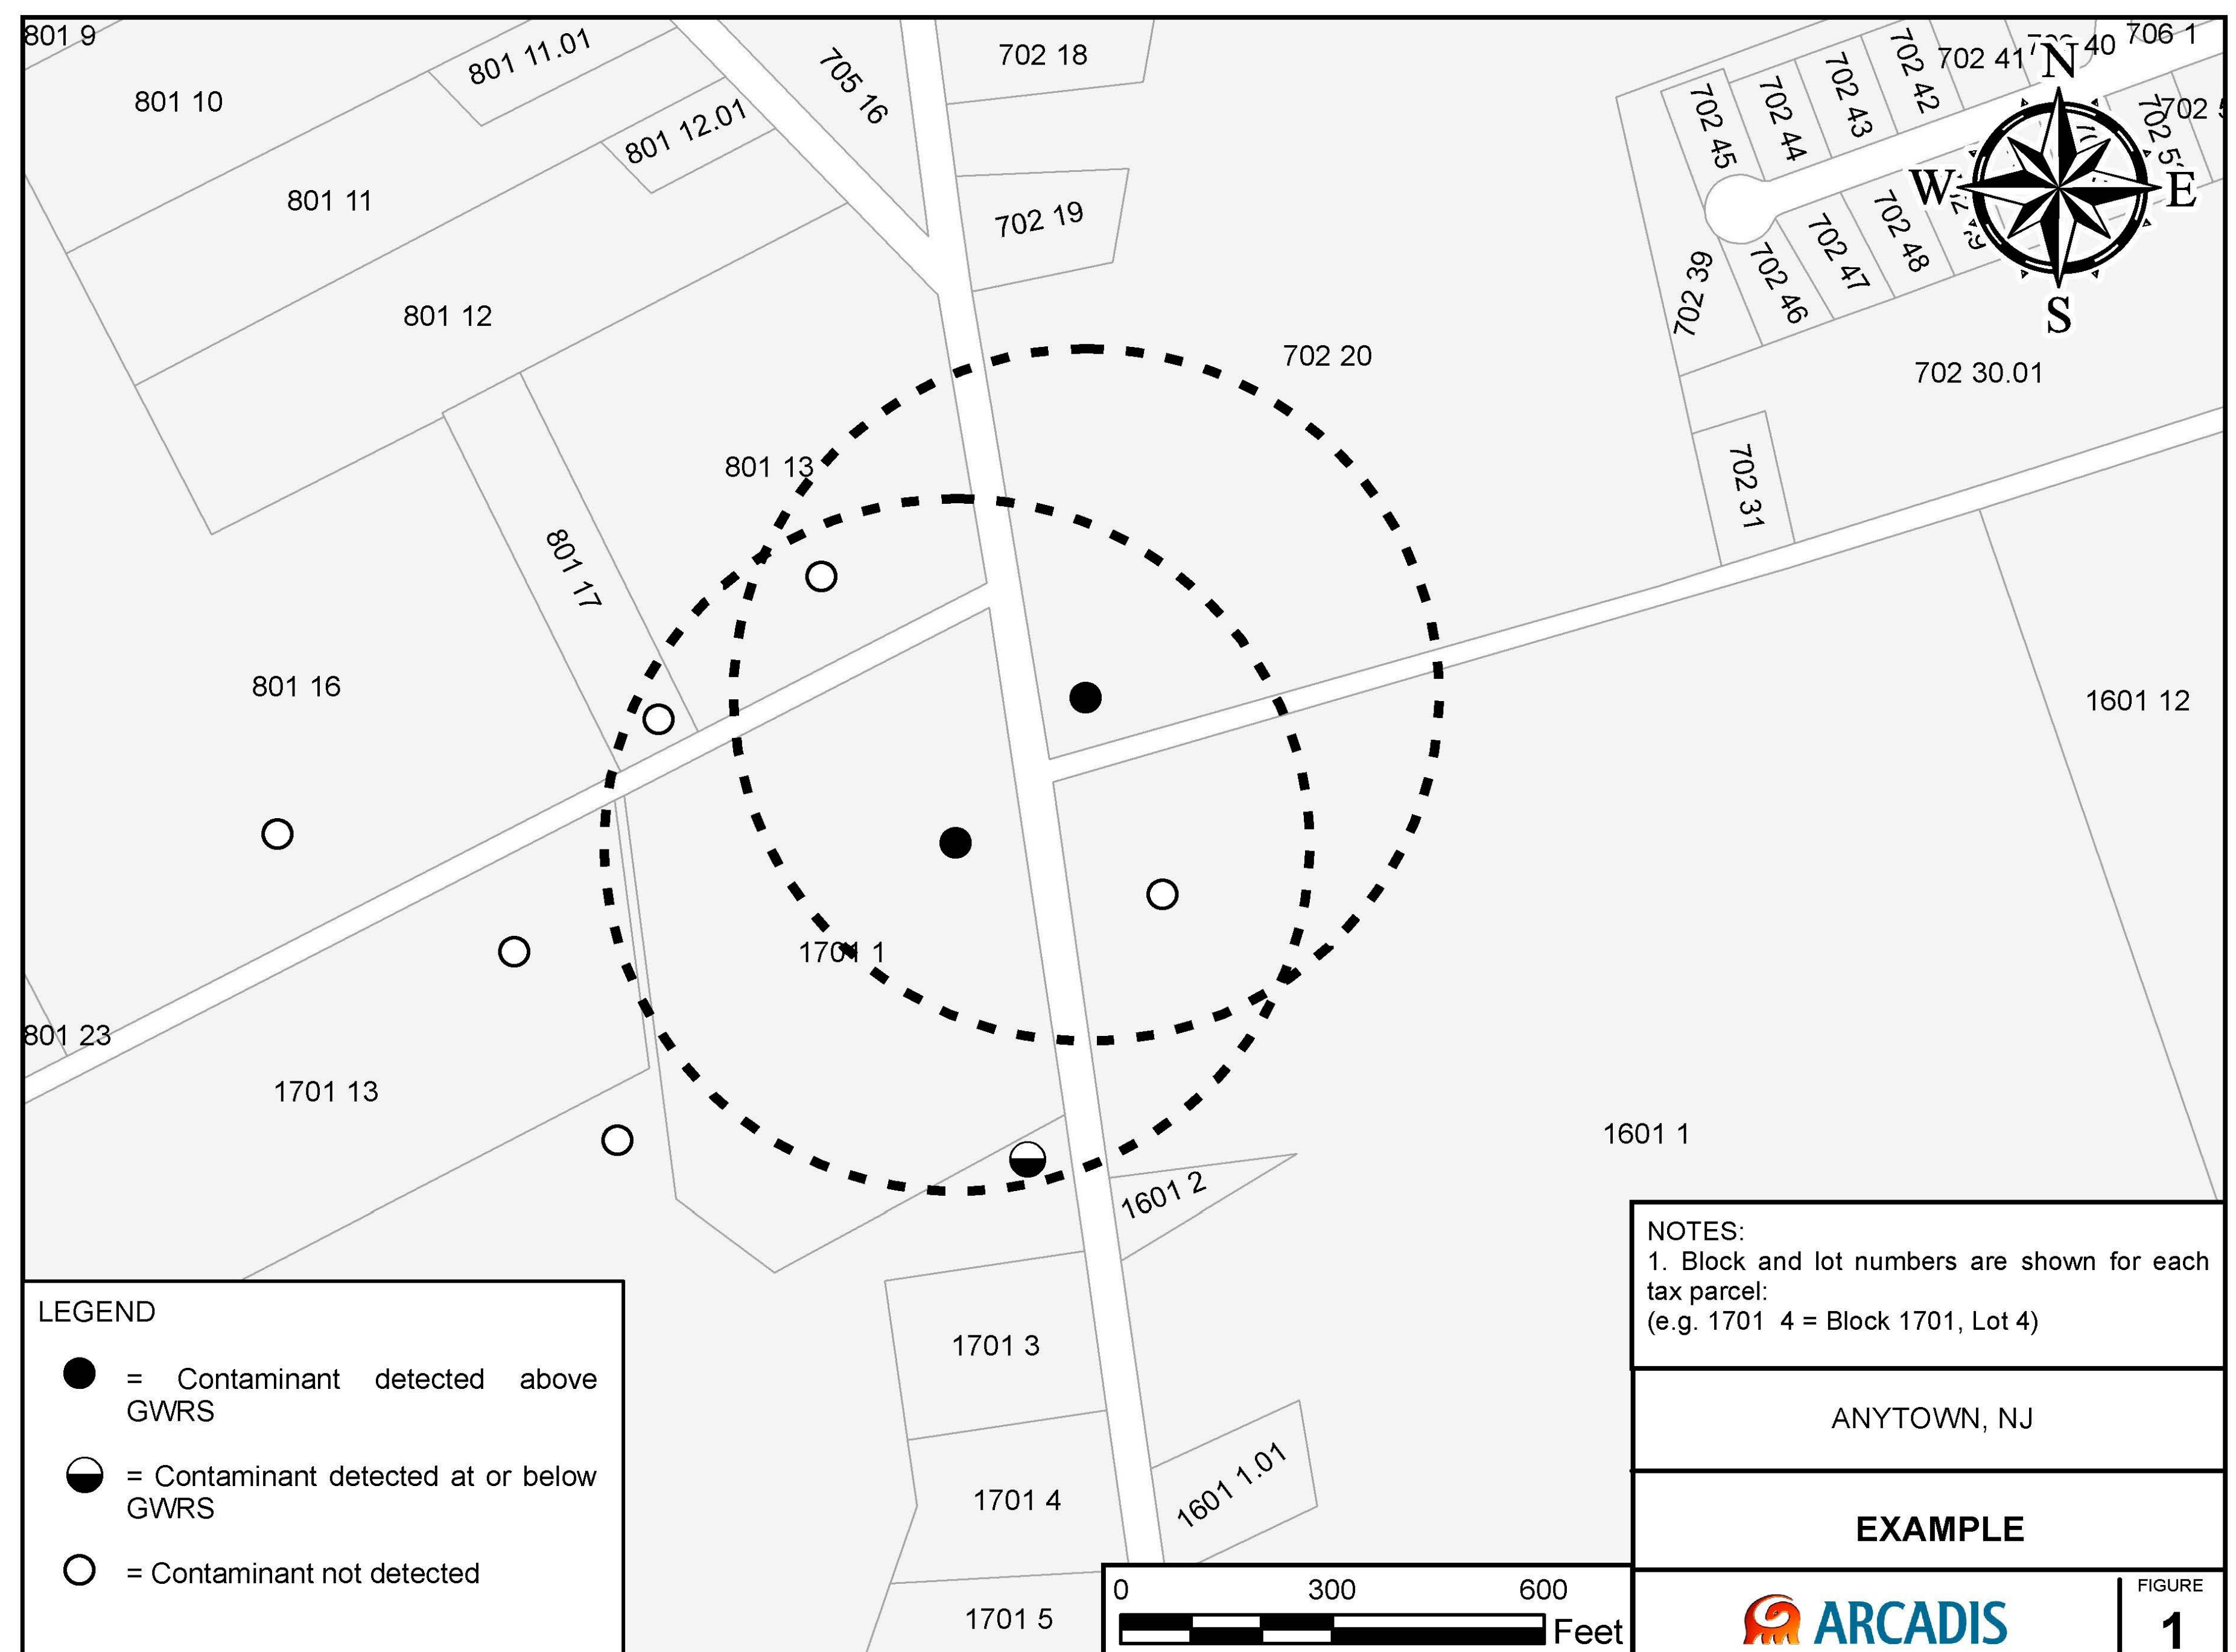

INNOVATIONS FOR LIVING®

**A well survey is triggered when impacts to off-site groundwater are identified.**

**Groundwater flows across the site in an easterly direction. As a result, Owens Corning is conducting the well survey in a defined area to the east of our site.**

NJDEP requires a well survey be conducted to identify the source of local drinking water within a defined distance of where the impacts were found, specifically:

- 500 feet down-gradient (same direction as the flow as groundwater)
- 500 feet side-gradient (perpendicular to the flow of groundwater)
- 250 feet up-gradient (opposite direction of the flow of groundwater)

# HOW THE SAMPLING PROCESS WORKS

INNOVATIONS FOR LIVING®

- 
- Step 1** Obtain written permission from the property owner for access to collect a sample of the well water
- Step 2** In accordance with NJDEP guidance and protocols, we are required to:
- Identify an access point to collect water that has not gone through a filtration or water softening system
  - Let the water run for 15 minutes before collecting a sample to ensure the water analyzed is from the well and not from the holding tank or pipes
  - Use only dark, glass containers to help prevent impacts to the sample from sunlight and contamination from the sample container
  - Take photos of the sampling point, the well, and the system
  - Complete a questionnaire to identify use, depth of well, and other information about the system
- Step 3** Send the samples to a NJ certified laboratory for analysis
- Standard turn around for results is typically 8 days
- Step 4** Provide copies of the laboratory analysis report to the property owner, NJDEP, Camden County Health Official, and municipal clerk

# **IF TESTING CONFIRMS APPLICABLE GROUNDWATER QUALITY STANDARDS ARE MET**

INNOVATIONS FOR LIVING®

**Owens Corning's testing is focused on the two constituents of  
DOWTHERM A™ (1,1-Biphenyl and Diphenyl ether).**

- If testing confirms the applicable groundwater quality standards are met, then no immediate action by Owens Corning is required

## **It's important to note**

Even if results show “no impacts” of the materials we are focusing on, it does not mean the water sampled meets all groundwater quality standards.

Residents should have their water tested if they have any questions related to water quality issues.

# IF MATERIALS RELATED TO OWENS CORNING ARE FOUND

---

INNOVATIONS FOR LIVING®

**Owens Corning's testing is focused on the two constituents of  
DOWTHERM A™ (1,1-Biphenyl and Diphenyl ether).**

- If results show levels of these materials above the applicable groundwater quality standards, Owens Corning is prepared to address the property owner's near-term and long-term potable water supply needs for drinking and cooking
- We will offer to meet with the property owner to provide test results and answer any questions
- Within 5 days of receiving laboratory report, we will provide bottled water for drinking and cooking
  - At no cost to the property owner
- Within 60 days, we will install an appropriate filtration system that is designed to work with the existing home water supply system
  - Installation and maintenance of the filtration system will be paid by Owens Corning

# IF MATERIALS NOT RELATED TO OWENS CORNING ARE FOUND

INNOVATIONS FOR LIVING®

## Owens Corning's testing is focused on the two constituents of **DOWTHERM A™ (1,1-Biphenyl and Diphenyl ether)**.

- If results find levels of materials not related to the Owens Corning site above the applicable groundwater quality standards, Owens Corning is prepared to work with local health agencies and authorities to address the property owner's potable water supply needs for drinking and cooking
- We will offer to meet with the property owner to provide the results and answer any questions
- Within 5 days of receiving the laboratory report, we will provide bottled water for use with drinking and cooking  
— At no cost to the property owner
- Owens Corning and NJDEP will provide direction to identifying options for a long-term solution

These actions are required by NJDEP,  
and do not mean and should not be interpreted to mean Owens Corning is  
responsible for those constituents.

# **THE NEAR-TERM SOLUTION: BOTTLED WATER**

---

INNOVATIONS FOR LIVING®

**Owens Corning will provide bottled water for drinking and cooking needs within 5 days of receiving laboratory results finding levels above applicable groundwater quality standards, in accordance with NJDEP requirements.**

- Water can be provided in a variety of appropriately sized containers to meet the property owner's needs
- The amount and frequency of the deliveries will depend on an owner's average weekly use
- The property owner will be provided with a number to call to request a future delivery, if needed
- Bottled water will be provided until the long-term solution is implemented (no more than 60 days)

# **A LONG-TERM SOLUTION: INSTALLING A FILTRATION SYSTEM**

---

INNOVATIONS FOR LIVING®

- A filtration system is an effective long-term solution for addressing the constituents related to the Owens Corning site and ensuring safe, potable water related to these materials
- Owens Corning has contracted with a local representative of Paragon Resource Management, Inc. to supervise and manage the installation and maintenance of the filtration system  
— At no cost to the property owner
- Paragon will work with the property owner to collect information needed to design a filtration system that will work best with the water system
- Paragon will work directly with the property owner to schedule a date and time for installation

# OWENS CORNING IS COMMITTED TO...

---

INNOVATIONS FOR LIVING®

- Working to protect public health and safety
- Meeting our regulatory requirements
- Sharing information directly, and in a timely manner, with property owners participating in the well survey
- Providing project updates as appropriate to local and county officials and interested citizens
- Responding to questions and concerns quickly and with an earnest effort to reach a mutually-acceptable result
- Safeguarding, sustaining and improving the environment for the benefit of current and future generations

# WORKING WITH THE COMMUNITY

INNOVATIONS FOR LIVING®

**Owens Corning is committed to keeping well survey participants and the communities of Waterford Township, Berlin Township and Berlin Borough informed of our plans and activities.**

If you have a question or concern, contact us directly and we'll do our best to provide you with the information you seek.

## **Ongoing Community Outreach Efforts**

- Regular updates to municipal and county officials
- One-on-one meetings with property owners
- April 5, 2012 Public Notification Mailing
- April 16, 2012 Advertisement in the *Courier-Post*
- May 16, 2012 Community Information Session
- Periodic Mailing to interested citizens

## **Questions?**

**Call our Community Information Line at  
(888) 827-0983**

**or**

**Email us at [OCBerlin@owenscorning.com](mailto:OCBerlin@owenscorning.com)**

Kelly Henry, Owens Corning Community Liaison, will be the first person to respond.
